

JARRETT RAGHNAL

New York, NY | 929-771-4066 | JRagnal@gmail.com | Active DoD Secret Clearance

SUMMARY

AI Solution Architect with hands-on experience designing and delivering production-grade RAG pipelines, agentic AI systems, and LLM-powered workflows in regulated financial environments. Experienced leading cross-functional project teams, engaging executive stakeholders, and translating complex business requirements into scalable, secure AI architectures on Azure. Comfortable owning end-to-end delivery from discovery through client handover — with a track record of measurable business impact.

TECHNICAL SKILLS

- Azure AI Stack: Foundry, Document Intelligence, AI Search, OpenAI
- Agentic Frameworks: LangChain, LangGraph, multi-agent orchestration
- RAG Architecture: retrieval pipeline design, chunking, embedding models, vector stores
- Semantic Modeling: GraphRAG concepts, knowledge graph integration patterns
- Python (primary), SQL, JavaScript/Node.js
- Cloud & Data: Azure, AWS, Snowflake, Microsoft Fabric, Databricks
- MLOps / LLMops: LangSmith, RAGAS, observability, evaluation frameworks
- LLMs: Azure OpenAI, OpenAI, Claude, Gemini, Microsoft Copilot
- Deployment: Kubernetes, Terraform, Docker, API-based integrations
- Security & Compliance: PII handling, access controls, audit readiness

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate | Oracle Vector AI Certification | CompTIA Security AI+ (SecAI+)

AWS: Generative AI with Large Language Models | IBM: Generative AI Introduction & Applications

PROFESSIONAL EXPERIENCE

AI Architect | *Security Finance (Contract)* | Remote | 02/2023 – Present

- **Served as principal AI architecture owner** across the full AI engineering lifecycle — from discovery and prototype evaluation through controlled rollout and production observability — for systems serving **1,200+ users** across regulated financial operations.
- Designed and delivered **RAG pipeline architectures** processing 500K+ documents at **96% retrieval accuracy**; designed chunking strategies, embedding models, and vector store integration end-to-end with RAGAS evaluation.
- Built and operationalized **multi-agent agentic systems** using LangChain, LangGraph, and Azure AI Foundry — autonomous agents handling document retrieval, classification, and decision routing with full observability via Datadog and PagerDuty.
- Led cross-functional project teams spanning data science, software engineering, and compliance — authored AI-ready requirements, interface specifications, and acceptance criteria to accelerate delivery and ensure alignment with responsible AI principles.
- Drove **AI workflow automation** reducing manual operational effort by **40%+**; shipped issue-routing system improving ticket accuracy from **30% to 90%**, saving **150+ hours/month** and delivering **\$200K annual savings**.
- Governed multi-vendor LLM platform decisions across OpenAI, Azure OpenAI, Claude, and Gemini; architected canary mechanisms and AI disengagement runbooks enabling rapid rollback without disrupting downstream workflows.
- Presented ROI analysis and architecture recommendations to C-suite stakeholders; produced technical documentation, SOPs, and executive presentations enabling non-technical leaders to approve and champion AI systems.

Independent AI Builder | *Self-Initiated Projects* | Remote | 2022 – Present

- Built OpenClaw multi-agent orchestration platform: production agentic system coordinating Claude API, local Ollama inference (Gemma 2 27B on Vast.ai GPU), and OpenViking knowledge management — hybrid routing architecture reduced API costs from ~\$10/day to \$3–5/month via intelligent model selection and escalation triggers.
- Developed ServiceNow automation demo: integrated Splunk API data ingestion with AI-generated remediation workflows and incident tracking — demonstrated end-to-end ITSM automation for enterprise IT operations.
- Integrated live financial APIs (CryptoPanic, Marketaux, Polymarket), Telegram control interface, and human-in-the-loop guardrails for autonomous trading research and market analysis workflows.
- Shipped Calee and Boncai: production React Native apps integrating Claude Vision API, Whisper STT, ElevenLabs TTS, Google Maps/Places API, and Supabase — deployed to TestFlight via EAS Build.

AI Workflow & Applied Intelligence Analyst | Cisco | Remote | 05/2021 – 12/2022

- Built **automation workflows** using Python, RPA tools, and LLM-assisted processing logic integrated into enterprise data pipelines supporting dashboards and predictive analytics.
- Contributed to early internal **LLM and Copilot-style knowledge system prototypes** — supporting system logic, workflow design, and integration architecture.
- Designed Power BI dashboards exposing model outputs, automation performance, and data quality indicators; automated repetitive engineering and reporting tasks improving team velocity.

Scrum Master | *Capital One* | New York, NY | 08/2020 – 04/2021

- Led Agile delivery for the **Zelle modernization initiative**, coordinating across development, QA, and cloud teams — managing project planning, status reporting, and stakeholder communication.
- Partnered with DevOps teams to streamline CI/CD workflows and reduce manual deployment steps; earned **Tech X Award Nomination** for innovation and delivery excellence.

EDUCATION

B.S. Computer Science *Morgan State University*
